

Assure24seven web-based monitoring

KryoTrak.com - standards compliant inventory management

- Web-based products
- Easy to use
- User designed vessels
- User images & sketches
- Visual identification
- Integrated backups
- CFR 21 Part 11 compliance

Assure24seven

The Assure24seven suite of products, from Planer, offers users a versatile mix of features and optional capabilities to suit all customer requirements and budgets.

Products are 'web-based' which means that information can be accessed from anywhere in the world, by means of 'web-browsers', so no software is required at the point of access.

A very wide range of input parameters such as temperature, level, humidity etc. can be monitored around the clock. Deviations can instigate public alarms or can be set to send notifications to named individuals by email or mobile phone. Over 1,000 measurement points can be accommodated and the system can start small and be added to, by the user, at any time, without the need of specialists.

A wide variety of standard reports is available, incorporating both tabular and graphical data, and custom reports are easily created, again, by the user, without need of specialist help.

Data is locked forever in a secure tamper-proof store and 'digitally-signed documents' and secure, password protected, log-ins ensure that systems meet the requirements of CFR 21 Part 11 security regulations.

KryoTrak

When KryoTrak inventory management is combined with Assure24seven condition monitoring, the user enjoys a remarkable and unique combination of features. For the first time users are able to produce a traceable record, not only of the temperature of a sample, but of its location too! If samples are moved from one storage vessel to another then a record is kept of the details of that move together with historical data regarding vessel temperature etc.

In order to fit in with the way you want to work, KryoTrak is available in three configurations.

KryoTrak.com Hosted, the web-hosted version, is the simplest and quickest system to get up and running. The database is installed for you on Planer's own server. Using the familiar Internet Explorer web browser you can quickly and easily manage your inventory, with no software to install or configure.

With **KryoTrak.box** you are provided with a pre-configured server for connection onto your own network at your premises, and **KryoTrak.com** is a software product for users who want the option of installing the database on their own Domino server.

KryoTrak features

- Easy to use - simple screens
- Vessel design by user for fully customised layouts
- Image import to help visualise your storage
- Graphical location identification
- User defined sample types
- User defines container types
- User defined vessels
- Integrated backups
- Full audit trail
- Three configurations available:
 - Hosted - simplest and quickest - nos software to install or configure
 - Boxed - pre-configured server in a box on your own network
 - Installed - user installs the software on their own Domino server

Assure24seven web-based monitoring

KryoTrak.com - standards compliant inventory management

System Requirements:

KryoTrak.com can be purchased either as a web hosted application, in a pre-configured server, known as KryoTrak.box or as a Lotus Notes database ready for integration with your own server. The requirements for each system are different.

KryoTrak.com Hosted

This is the simplest and quickest system to get up and running. The database is installed for you on Planer's own server. All you need to access the system is a PC running Internet Explorer. Using the familiar web browser interface you can be managing your inventory with no software to install or configure. With the hosted version of KryoTrak.com, all of the installation requirements are handled by Planer. All you need to ensure is that you have an Internet connection and client PC.

Client PC:

- Microsoft Internet Explorer v6+ with cookies enabled and Java Virtual Machine (VM) installed.

KryoTrak.box

With this option, you are provided with a pre-configured server for connection onto your own network at your premises. With its built-in CDRW drive and powerful KryoTrakAdmin configuration program, you can be up and running quickly and easily. Automatic backups to CD or to other network folders is provided as standard. Before trying to install the KryoTrak.box server you must ensure that your network and client PCs meet the minimum system requirements.

Network:

- Network infrastructure compatible with the KryoTrak.box 10/100BaseT network card. Category 5e cable recommended as minimum.
- Free RJ45 Socket on hub or router located within 100m (330 feet) of KryoTrak.box.

Client PC:

- Microsoft Internet Explorer v6+ with cookies enabled and Java Virtual Machine (VM) installed.

Administrators Client PC

(Please note that this PC is only required when first connecting the KryoTrak.box server to the network. Once the connection has been made only the standard Client PC is required.)

- 32 MB RAM minimum
- Windows 95 SP1, 98 SE, NT4 + SP5, ME, 2000 + SP2, XP Home & Professional.
- CD Drive.
- Microsoft Internet Explorer v6+ with cookies enabled and Java Virtual Machine (VM) installed.

KryoTrak.com Software Only

For those users who already have a Domino server, the option of installing the database on to your own server is provided. If you are intending to integrate the KryoTrak.com database with your own server system, you will need a Domino server. Please contact Planer for details of the current the installation requirements.
